Alerting method for a wireless communication device

Abstract

An alerting method which will amplify and broadcast the notification signal produced by a wireless communication device, or use a notification signal produced by the invention. The invention will signal an incoming message or a missed message by amplification of the audio or visual signal generated by the wireless communication apparatus, or audio or visual signals generated by the invention itself. The invention may also charge the power source contained in the wireless apparatus and/or power the wireless apparatus. The device may also serve as a microphone and speaker attachment to the wireless communication apparatus.
